AT NC STATE UNIVERSITY

Planning and planting for a better world.

Friends of the JC Raulston Arboretum Newsletter

Number 11, Summer 2000

Director's Letter

By Bob Lyons, Ph.D.
Director

I open this letter knowing that I have to get in some very significant information about what we've done and what we hope to do in the near future. First and foremost, the progress of the Education Center.....are you familiar with "visualization," what many athletes do to prepare for a major event? Well, one could say we're there by planning to begin our construction before the end of this calendar year, in light of the fact that we are still around \$100,000 short. Remember, I said planning, but there's nothing wrong with that. By the time you receive this newsletter, a call for contract bids will have been publicized and we will have already had a "pre-bid meeting" with potential project bidders. We then look towards Election Day, which, for the first time in my life as a registered voter, holds more meaning than just the selection of a new U.S. President. In North Carolina, there will also be a bond referendum at stake, a referendum that promises to benefit all students on all public university campuses by targeting physical facilities. The soon-

to-be JC Raulston Arboretum McSwain Education Center is in that bond issue to the tune of \$500,000 and will enable us to complete the project with haste. And, we will get to the business of education even more assuredly. I'm passing the mark of my first 1.5 years in this position and recently attended an "Education Center Building Committee" meeting, in the process finding out that this committee has been in place for 10 years. Enough said! Please join me in going to the polls in November!

We've seen some significant facilities work done lately, most notably a \$30,000 renovation of our greenhouses. The JCRA "behind the scenes" includes nursery space, propagation beds, and greenhouse benches, in addition to those areas where we put our plants in full view. Keeping many of our membership benefits going depends on these facilities, as do the JC Raulston Arboretum Selections program and our own needs to investigate the growth of some of our newest accessions.

Ms. Ruby McSwain donned her spring finery at this year's Gala.

Photograph by Sheri D. Thomas

Moving outdoors, we've also made some repairs and upgrades to our physical systems.....and of course we've had a very wet season! Irrigation systems are often considered necessary evils by keepers of the landscape, keeping you challenged by their operational quirks, but providing you peace of mind during establishment and droughts. Thanks, Doug Champion and Wilbur Watering for your help here, too.

I've got several items to bring to your attention this time. Thanks to all of you who responded to our recent survey. Our Board of Advisors is currently looking at the results and we'll report back as soon as possible. I was delighted to notice that one of the

Director's Letter

most salient points from your survey was that this newsletter is viewed as one of the most important membership benefits, a trademark we intend to uphold and strengthen.

It is one thing to say that membership is the backbone of an organization, but in fact, it really is for the JCRA, and in a big way. Suffice it to say that our members keep us afloat and at this writing we number around 2,200. Consider this. In the fiscal year 1999-2000, we required about \$90,000 for "soft money" salaries alone; specifically, these are positions which do not receive monies from university sources but are essential to support our volunteer coordination, plant records management, and education/programs coordination.....in addition to our undergraduate students hired on flexible schedules. These monies MUST come from memberships and related gifts, and given the rightful referral of some recent gifts to our building fund which may have ordinarily been targeted to salaries, our memberships have become even that much more important. Our membership roster is a strong one, and one to be envied by similar organizations. However, it must continue to grow to be healthy and supportive of what we do....whether through the addition of more staff, construction of new support facilities, and/or the acquisition of new plants. It is also truly remarkable what we do with so many staffers that are part-time.....yes, part time.

In light of this concern, I've asked the Board of Advisors to look at our membership structure and concomitant benefits, and we will certainly report back to you regarding their recommendations when possible. Our membership coordination is ably overseen by **Donna Walker** and she has already visited with her counterparts at Duke Gardens, NC Botanic Gardens, and the NCSU

Library and is planning to visit Philadelphia area institutions for their views on membership organization.

So, if you've picked up this newsletter from a talk, the JCRA itself, our booth, or at our office, please join us in the membership ranks. If you are a card-carrying member already, please renew when that letter comes through the mail.....and if you receive that letter and you're feeling even more generous, "up" your membership level!

On another note, I'm pleased to present a financial break down of this year's most successful Gala. These proceeds are treated differently than general membership revenues. Beginning this year, Gala profits are targeted for supporting both our Development efforts and another specific project, this year the Education Center. In fact, we share the financial responsibility with the College for generating support monies for ourselves, and the Gala is the primary mechanism to do so. Once we satisfied our contribution to Development activities (\$15,000), this year's great success allowed us to allocate even more than the intended 50% of the Gala profits to the Education Center. All this being said, please look at the accompanying breakdown and note that \$27,377.84 went to the Education Center. For the record, 456 guests attended the First Tier of the Gala and 340 of them stayed for dinner in the Second Tier. You may recall that among the many changes instituted in the Gala format, this year we gave people options. Come and enjoy the beverages, light food, and silent auctions or stay for dinner and the live auction.....the former for \$50/

person, the latter for \$125. While we all waited by the mailboxes wondering how well this new change would be received, we were delightfully surprised by the incoming reservations! This system worked very well....I guess it is all about choices. I'd like to add that the Gala is different things to different people and if you've never come, please come in 2001.....you can dress in a tux or jeans, jacket or polo shirt, sandals or wing tips. Just come! You are supporting the JCRA and that's what counts most. My thanks again to **Karen Suberman** for chairing the Gala committee and working so well with Donna Walker to pull this off!

GALA INCOME

First Tier Guests - \$6,375.00

It is always great to tell you of a new member of the JCRA team. **Andy Upshaw** has been working with us as a Fellow in Plant Evaluation and Teaching, an experience that will take him up to the end of this calendar year. I'm anxious to refine our plant evaluation system, in conjunction with the North

Carolina nursery industry, to include other people and other sites, and Andy has been instrumental in starting that process. If we are to make recommendations concerning better landscape plants, then a formal network covering our state's diverse climate is in order. Who will be the network participants, what will be the reasonable expectations of evaluation sites, and how will our information be measured and used? These and other questions have filled Andy's plate and will eventually enhance the JC Raulston Arboretum Selections program. More about this program in later issues of our newsletter.

In the same breath to welcome Andy, I find myself saying a "pseudo-farewell" to **Doug Ruhren**....."pseudo" because I know we'll still see him, but on a more limited basis. He has taken a position with Daniel Stowe Botanical Gardens <www.dsbg.org> in Charlotte, and they are lucky to get him....a fact I reiterated quite emphatically to DSBG's Director **Mike Bush** at a recent meeting! Doug's history with the JCRA is a long and rich one, perhaps best known for his affiliation with **Edith Eddleman** and our incredible Perennial Border AND its recent renovation. I'm convinced that no better team exists because it represents the synergy of two remarkably talented people, each quite capable of stellar works alone, but thriving in concert when paired. It has indeed been a pleasure to get to know Doug in my

All in a Day's Work: New Labels at the JC Raulston Arboretum

By Todd Lasseigne

Plant Collections Management Fellow

Upon being asked to write another column for this season's newsletter, I did not have a topic (aside from focusing on a given subset of interesting plants) that readily came to mind. After attending The American Association of Botanical Gardens and Arboreta (AABGA)/Center for Plant Conservation (CPC)/Botanic Gardens Conservation International (BGCI) World Botanic Gardens Congress in Asheville in June, I then thought that I would write a column on the grim face of plant conservation (2/3 of all plant species may become extinct by 2100 A.D.), maybe focusing on some endangered plants in the Arboretum collection. However, that story will have to wait, as I've been inspired by another topic – that is, the intricacies of relabeling the Arboretum's collections.

Nancy Doubrava, JCRA Interpretive Specialist, who is heading up this massive task, has called on my expertise in nomenclature and related matters. This is the stuff I live for – researching the origins and names of the myriads of plants in the Arboretum. I think you might enjoy seeing how this process is done, and particularly, you might enjoy its oft-serendipitous nature. I'll use examples from the list on which I am currently working – the Perennial Trial Bed (formerly the Early/Late Border). And, yes, I do

appreciate and know the perennial plants, as well as the woodies!

Thus far, this bed displays a total of over 95 different kinds of plants – from the familiar asters and their ilk to the yuccas and *Zephyranthes* (the rain-lilies). The plants in this bed hail from around the globe, with species native to all continents except Antarctica and Australia. Thus, I surmised early on that no one source would supply me with all of the data needed. Being a geography enthusiast, I took this to also represent an opportunity to convey knowledge about world geography through our plant collections. The standard references for this task, [Hortus Third](#) and the [RHS Index of Garden Plants](#), would only represent starting points. For instance, in labeling *Buddleja davidii* 'Bonnie', I feel it is only marginally useful to say that the species is native to China. That's like saying that live oak (*Quercus virginiana*) is native to the U.S. – a true, but rather uninformative statement. Thus, *Buddleja davidii* is listed as being native to central and western China (abbreviated as "c & w China" on the label). For hybridized plants, such as *Buddleja* 'Lochinch', this plant has no "nativity" and as such is said to be "of garden origin." These two plants are easy ones to label, I was to learn.

The Perennial Trial Bed currently contains one hybrid and four species asters. Notwithstanding still unresolved views on taxonomic delineations in *Aster* (some of which would change our beloved New England aster from *Aster novae-angliae* to *Symphotrichum novae-angliae*), I faced the daunting challenge of finding geographic ranges and common names for these plants. Well, for *Aster grandiflorus*, a quick consultation of Armitage's [Herbaceous Perennial Plants](#) 2nd ed. revealed the common name "great aster." A subsequent perusal of [Manual of the Vascular Flora of the Carolinas](#) by Radford, Ahles, and Bell (RAB) revealed that the native range is Virginia, south to Florida. For *Aster concolor*, however, the story was

not as clear. RAB listed Virginia and Kentucky, south to Florida and Louisiana as a range, but NO common name was given. As a result, I checked out the in-progress "new" flora of the Carolinas, Alan Weakley's [Flora of the Carolinas and Virginia](#), of which I own a copy of the "November, 1998 draft," but found that no common name was included therein either. I gave up, for the time being at least, on finding that common name and turned to the next plant, *Aster* 'Miss Bessie', which we received from Niche Gardens <www.nichegdn.com>. Lo and behold, in the Niche Gardens catalog I read almost immediately about the "1996 NC Wildflower of the Year." *Aster concolor*, the "eastern silvery aster." WOW! Serendipity at work. I would later find in other nursery catalogs common names that were not readily found elsewhere, such as "prairie aster" for *Aster turbinellus* in the Woodlanders catalog, "plum-scented iris" for *Iris graminea* in the Fairweather Gardens catalog, and "yomena yomama" for *Kalimeris yomena* in the Plant Delights <www.plantdelights.com> catalog. (I decided to use "golden false-aster" instead for *K. yomena*.)

Woodlanders Nursery also came to the rescue when I came upon the plant labeled as *Andropogon* sp. 'Silver Beauty'. Knowing Woodlanders co-owner **Bob McCartney** as a good friend, I fired off an e-mail. Bob's reply was quite informative. He said that Woodlanders originally received the plant from Superior Trees in Florida, and that 'Silver Beauty' was a selection of *Andropogon virginicus* var. *glaucus*, a native grass known as "chalky bluestem." Thanks, Bob! Problem solved! Unfortunately, I forgot to include in that e-mail a question about *Saccharum* sp. received from Woodlanders, too. Oh, well, another e-mail, another day.

Several plants completely eluded repeated searches for information. For instance, a plant labeled *Delosperma herbeau* seemed suspiciously misspelled. I therefore jumped on the

Plant News

Internet, typing in “delosperma” and, lo and behold, came to a plethora of sites, some of marginal relationships to the hardy ice-plants. One, however, answered my prayers, and I found that *Delosperma herbeum* was an ice-plant native to the southern African nation of Swaziland. Plus, there was a nice photo of the plant, all covered in white flowers.

By accident, I hooked onto the “mother of all Web sites” (Saddam himself would be proud), for U.S. native plants, at least, when I typed in *Callirhoe alcaeoides*, for which I was seeking a common name. I was led to the BONAP (Biota of North America Program) Web site, complete with searchable indices at <www.csdl.tamu.edu/FLORA/b98/bongenxx.htm>. In it, I was able to search all species of *Callirhoe* and find *Callirhoe alcaeoides*, the “light poppy-mallow,” along with a state-by-state geographic distribution map. Better yet, these maps are included for ALL species. Rechecking other names already “complete,” I learned that BONAP’s geographic distribution for *Aster concolor*, [Massachusetts](#) to Kentucky, etc., differed strongly from the one I had derived from Radford et al., as [Virginia](#) to Kentucky, etc. Remembering that the [Manual of the Vascular Flora of the Carolinas](#), published in 1968, only included geographic distribution data for states adjacent to the Carolinas, I opted to use BONAP’s distribution data instead, as I later did for all other U.S. native plants.

I had also anguished over finding a common name for an obscure plant called *Jamesianthus alabamensis*, which I really didn’t want to just call the “Alabama jamesianthus.” Initial Web searches (before I discovered the BONAP Web page) for *Jamesianthus* led me to an individual’s résumé (name withheld), an interesting article on the evolution of the Coastal Plain flora, and, among many others, a site on the

protected plants of Georgia. After waiting forever for my computer to download the information, I found out that *Jamesianthus* (there is only one species in the genus) is known as “Alabama warbonnets.” Great name, eh? Wonder what its story is. I later found the same common name on the BONAP site. *Jamesianthus* is only native in Georgia and Alabama, and is a member of the aster family (Asteraceae).

Other interesting examples follow:

1. South Africa holds a richly diverse flora (ca. 25,000 species!). I was unhappy with saying native to “South Africa” just as I was in the *Buddleja* example above. Thus, *Delosperma sutherlandii*, is native to “South Africa (Natal and Transvaal Provinces).”

2. For *Euphorbia amygdaloides* var. *robbiae* (known more commonly as *E. robbiae*), I really didn’t like the common name “Robb’s spurge.” Furthermore, knowing that the “-ae” suffix refers to the feminine gender, I equally disliked “Mrs. Robb’s spurge.” Unfortunately, both Armitage and Jellitto and Schacht’s [Hardy Herbaceous Perennials](#) were unhelpful in this regard. I consulted the specialist literature, specifically the book [Euphorbias: A Gardeners Guide](#) by Roger Turner and found the much more pleasing name “Mrs. Robb’s bonnet.” I also learned that this variety (var. *robbiae*) of the “wood spurge” (*E. a. amygdaloides*) is only native to northwestern Turkey and that it hasn’t been collected or seen there in decades. So sad to think that such a fine plant may no longer exist in the wild.

3. *Hypericum ximodorum*, of which we have ‘Summergold’, I at first assumed was of “garden origin.” Yet, I decided to check RHS, just in case. Sure enough, this hybrid occurs naturally in the wild, as well as spontaneously in the garden when the two parental species occur together. Its native range includes northern Spain to northern Italy and the islands of Corsica and Madeira.

4. I also assumed that “just another” red-hot poker, *Kniphofia thomsonii* var. *thomsonii*, was native (as were they all, I thought) to South Africa. Not so! Web searches (and comparisons with the range of *K. thomsonii* var. *snowdenii*, listed in Phillips’ and Rix’s [Perennials](#)) revealed that this plant is native to high mountains of central Africa, including the nations of Uganda, Kenya, and Tanzania. Lesson learned here!

5. I found out that “French” lavender isn’t native in France, at least not if you are growing *Lavandula stoechas* var. *pedunculata*. When in Spain several years ago, on a Mediterranean ecology field course, I came to know this plant as “Spanish lavender.” Native to central Spain and northeastern Portugal, I concurred and kept the Iberian epithet. “French” lavender would be reserved for other botanical varieties of lavender (e.g., *L. stoechas* var. *stoechas*).

6. *Yucca pallida* lacked a common name in the standard references. The new book, [Agaves, Yuccas, and Related Plants](#) by Mary and Gene Irish, unfortunately didn’t list one either. When I consulted my “Bible” on the Texas woody flora, Robert A. Vines’ [Trees, Shrubs, and Woody Vines of the Southwest](#), I learned that the “pale-leaf yucca” (an obvious common name) occurred only in a few counties in northern and central Texas!

7. Our records for a plant known only as *Stevia* sp. seemed to indicate that it originated from Yucca Do Nursery. I was able, through BONAP, to find that it belonged to the aster family and that a common name for the genus is “candleleaf,” but I didn’t know which species we held. I e-mailed my friend **Carl Schoenfeld**, owner of Yucca Do Nursery, who replied as follows. “Sorry. We have collected many *Stevia* and various *Stevia*-look-a-likes and have no idea what species they may be. There are several hundred species known just in Mexico alone. We are now in the 21st century and still the greatest obstacle to overcome is plant identity.” Sobering words, indeed!

Plant News

Thanks, Carl! Perhaps this is one for **Dr. Paul Fantz** to look into. Now where did I put that key to the species of *Stevia*? Hmmmm!

8. Trouble with sedums appeared next on the horizon. What should I do for common names, for instance? Well, using a long-forgotten, but still useful and vastly underappreciated book entitled Standardized Plant Names (1942 edition), I found a great common name for *Sedum alboroseum* (with white to pink flowers), the “blush stonecrop” that appeared NOWHERE else in print (including the specialist book Sedums: Cultivated Stonecrops by Roy Stephenson). Then, using Stephenson’s book, I was able to find “cliff-dwelling stonecrop” for *S. cauticola* (and, no, I do not want to hear how many sedums are cliff-dwelling, too!). Upon finding that *Sedum* ‘Neon’ wasn’t listed in Armitage’s book, I noticed that the Plant Delights catalog included it as a sport of *Sedum* ‘Brilliant’. Since the latter is a cultivar of *S. spectabile*, I then immediately knew which species’ geographic range information to look up for ‘Neon’. Sometimes these things are logical!

To be sure, some plants still require further investigation. For instance, Hortus Third says that *Gynura bicolor* is native to the Moluccas, a group of islands in the Indian Ocean off the coast of southern India; while the RHS Index says that this species is native to the Himalayas. This species, as such, remains on my “keep looking” list, as I do not want to just state that the species occurs from the Himalayas, across the vastness of India, to the Moluccan islands, without any indications that it really does.

For a common name, does *G. bicolor* become the “two-colored gynura,” as a translation of the name would suggest? Well, this worked well for *Caryopteris divaricata* (the “spreading bluebeard”)

instead of just calling it “bluebeard” along with all the other many species of *Caryopteris*. *Salvia littae*, native to Oaxaca State in Mexico, also lacks a common name. From reading about it in the Woodlanders catalog (only sparse information) and Betsy Clebsch’s A Book of Salvias, I have tentatively dubbed this species as the “magenta bush sage.” I think that “sage” alone might confuse too many people with the culinary plant *Salvia officinalis*.

On another front, I not-so-easily looked up information on *Tripterygium regelii* (“Regel’s threewingnut”), and then decided to go look at the plant, discovering to my horror that it was instead *Heteropterys glabra* (“redwing”). To date, I still cannot find the latter name in any reference book, although a Web site did indicate it as being native in Paraguay. A 1997 edition of Woodlanders catalog said it was native in Mexico.

Lastly, a plant listed as “*Solidago flexuosa*” cannot be so, as that name simply doesn’t exist. Is it instead meant to be *S. flexicaulis* (likely) or *S. fistulosa* (less likely)? Greater spelling errors in the history of the Arboretum have occurred, after all. Ask me to tell the story of *Elixlausa* one day.

I hope that in reading this, some of you will have learned about the apparent “madness to the method” as well as the “method to the madness” in finding this information. One general rule I can formulate, though, is that when you are in doubt, go to the source. **Jenks Farmer** (Riverbanks Botanical Garden, Columbia, SC <www.riverbanks.org>), for instance, gave us a plant we had accessioned as “*Duranta*,” I e-mailed him when I didn’t know where to go. As a result, we now have a more complete record for this plant. Secondly, the fact that one source does not have the information you seek does not mean that this information does not exist in other, more specialized references.

Back in June, at the World Botanic Garden Congress, I met and had an

enlightening discussion with a horticultural taxonomist, during which he suggested that it might be fruitful for him, me, and other like-minded individuals to work on a “best practices” manual for labeling collections. Who knows what could come of this work?!

Bond Referendum to Support Arboretum

By Keith Oakley
CALs Development Director

Please be aware that the November 7, 2000 statewide University and Community College \$3.1 billion bond referendum does include \$500,000 for the McSwain Center (Horticulture Classroom) at the JC Raulston Arboretum. This \$500,000 would put the Arboretum in a position to begin construction of the McSwain Center Phase I almost immediately. We hope that you will plan on voting on November 7, 2000.

Also, we are continuing to raise funds for the entire McSwain Center Complex - Phases I, II, and III. There are numerous naming opportunities still available. If interested, please contact **Donna Walker**, Development Associate for the JC Raulston Arboretum at (919) 513-3826 or via e-mail at <donna_walker@ncsu.edu>.

JCRaulston Arboretum

AT NC STATE UNIVERSITY

1999 Accessions

This, our last accessions list published in the 20th century, is also our last one that will be printed in the newsletter. Starting with our 2000 Accessions, the lists will only be available for viewing on our Web site at <www.arb.ncsu.edu>. Updates will be posted several times a year along with an end of the year report available each January.

This decision was made for several reasons:

- Saving natural resources. The 1999 Accessions publication required over 10,000 sheets of paper.
- Electronic publications allow the viewer to search the document for key words.
- Electronic publications can be stored for future reference in a fraction of the space required of hard copies.
- Reduced publication and mailing costs.

**Should you not have access to the Internet, we will be happy to send you a copy via mail if you call with or send Chris Glenn your mailing address.

Leading with Quality, Value and Craftmanship!

Director's Letter

Director's Letter, from page 1 year and a half tenure so far. He is an individual of exceptional plant knowledge with an open door to sharing it. His regular presence will be missed during those many hours he labored at the Border, but if the incredible first-year progress of the Border is any indication of his own new position potential, he'll be soaring in no time.....best of luck, Doug!

As a closing note, a few words about our collections. They are undergoing big changes, BIG CHANGES, as they should, and **Todd Lasseigne** (Plant Collections Management Fellow) has been enormously instrumental in this regard. It is time to evaluate our current inventory for timeliness, uniqueness, and for the very fact that we are doing extensive nomenclature verification before we engrave new labels. We are also opening new areas for the inclusion of newer plant materials. The Perennial Border is included in this renovation process and is making superb progress, but do you know what goes on in the background while new plants show up? Accessions and mapping! Our Plant Recorder, **Valerie Tyson**, has kept an unenviable pace going just to stay up with the new plants being installed regularly. And, I'm pleased that we've been able to include our volunteers and undergraduate students in this process; next time you visit be sure to grab hold of a new map which accurately identifies all the component species. We think it will make your visit a lot more educational and comfortable!

In closing, remember, we're not a secret.....talk about us, engage your friends, enlist them as members, and spread the word!

COMMERCIAL RESIDENTIAL PROPERTY MANAGEMENT

A Commitment to the Community

"At York Properties, Inc. we are proud to be active, contributing members of the Triangle community.

While our business and professional activities strengthen the area's economy, our civic involvement improves the quality of life for the entire community.

We believe a big part of our success is our commitment to offering the most comprehensive and customer-oriented real estate services in the Triangle—and caring about this place we call home."

Gala 2000 A Parade of Hats

By Donna Walker
Development Associate

A butterfly flying all the way from China to Raleigh? That's just what happened! Oh, not a real, live butterfly. These were large, beautiful paper butterflies, ordered by Decorations Committee Chair, **Sylvia Redwine**, for the Gala in the Garden 2000. Butterflies joined hats and striking floral arrangements as just some of the colorful and innovative decorations that pleased the eye as hundreds of people, from all over the Triangle and the state, arrived at the JC Raulston Arboretum to enjoy the delights planned for them by the hard-working and dedicated Gala Committee. The honorary chairs for this year were **Bill and Libby Wilder** (Bill is former Board of Advisors Chair) and **Ms. Ruby Van Crumpler McSwain**. The committee, chaired by event planner extraordinaire, **Karen Suberman**, began work in November to make sure this was the most glamorous and fun-filled Arboretum gala to date.

The event, traditionally planned the first Sunday in May — this year, May 7th — was organized as a two-tiered event for the first time and was a huge success. The first tier, Garden Spirits, was a cocktail party held in the Arboretum among the plants and included a silent auction. The catering staff circulated trays laden with excellent hors d'oeuvres and beverages of choice. Folks on the lookout for a bargain kept the bidding in the various auction tents fast and furious. A Hat Shop was staffed by volunteers and chapeaus of all sizes, colors, and designs were everywhere. Even the gentlemen in the crowd got into the mood of the evening and several of their hats were equally fun to behold.

The second tier was an elaborate sit-down dinner and live auction held beneath a breezy tent imaginatively decorated by Sylvia and her team. The tent was located in the Horticultural Field Laboratory, an area behind the Arboretum loaned to us by Extension Landscape Specialist, **Kim Powell**. For major donors the segue between the two events was a brief tour lead by Arboretum director, **Bob Lyons**. He pointed out the new gate between the Arboretum and our neighbors, **Miles**

Above: Bill and Libby Wilder
Photograph by Sheri D. Thomas

Wright and Eyebeam, then led the group to a pine copse near the dining tent for a champagne toast and on to the tent to begin the final festivities. During a delicious dinner, welcoming remarks and thank-you's were extended by NC State University **Chancellor Marye Anne Fox**; College of Agriculture and Life Sciences **Dean James Oblinger**; Bob Lyons; **Peggy Fain**, Arboretum Board of Advisors president; and Karen Suberman.

Chancellor Fox made the thrilling announcement that Ms. Ruby McSwain had made a donation to the Arboretum's building fund of \$1.2 million, bringing Phase I of the Building Fund Campaign nearly to a close. Ms. Ruby's comments showed her true warmth, her humble generosity, and her love of the Arboretum and its plants. The Chancellor also thanked **Mr. J.W. York** for converting his and **Mrs. Lib York's** challenge pledge to an unconditional pledge. When the standing ovation had finally subsided and a few eyes had dried, **Rufus Edmisten** stepped up to the microphone and filled in as auctioneer for the live auction. Bidding was hot and heavy with Rufus using his wiles and personal knowledge of those attending to encourage a loosening of the assembled purse strings. Smiles and checkbooks were the order of the day as the happy high bidders in both auctions lined up to pay for their treasures and tried to figure out exactly how to get all the goodies into that

Development News

compact car! The guests drove away, the caterers packed up the leftovers, the lights were dimmed, the staff sighed with relief, and the evening came to a close. It was a great party!

Behind the Scenes

Committee Chair

Karen Suberman, previously an integral part of the overall Gala Committee, graciously stepped up to the plate as committee chair, using her amazing organizational skills. From past experience in food and beverage and her present as nurserywoman, Karen drew upon skills that kept the committee on task and running smoothly. She knew the questions to ask of the various vendors of tents, chairs, food, the PA system, and on and on. Her skills told us when and where corners could be cut and when to go for it! The energy, time, and talent Karen put into the gala were astounding. The party proved to be as extraordinary as expected. Without Karen at the helm, believe me, this ship would have gone down. Thanks, Karen!

Auction Committee

A newcomer to the committee, but nonetheless an experienced hand at auctions, **Marty Hayes** jumped into the fray and gave us a truly organized way of putting together the auction. Armed with donor forms and a time line, the members of the Gala committee helped put together an amazing collection of items to delight the mind. Everything from stationery to fabulous trips was donated by individuals and businesses across the state. Most of the items were assigned to the silent auction, with a few of the special items reserved for the live auction held during dinner. Those items designated for the silent auction were again divided into groups and placed under separate tents entitled The Secret Garden, The Finer Things in Life, Out On The Town, Looking Your Best, The Men's Lounge, and Botanical Quintessentials. Whew! An excellent

.....
fundraiser, this was great fun for everyone, even those who were just enjoying watching others compete in the bidding. Each tent was manned by a volunteer or two who were knowledgeable about their wares and encouraged the bidders and answered questions. Aided by **Carol Smithwick** who assisted greatly by coordinating the auction brochure, Marty's team put together two fantastic auctions!

Corporate Committee

It takes someone in-the-know to say just the right thing when contacting the potential corporate donors and **George York** came to us with great skills. A former member of the committee, George went to work via phone and personal notes. All these efforts culminated in a total far surpassing previous years. Congratulations, George and team.

Decorations Committee

We've already briefly mentioned Sylvia Redwine's beautiful and creative decorations, but mere words defy us. Sylvia and her team worked many long hours decorating hats and doing prep work for the final day. Beginning at the roadway into the Arboretum and continuing into the Klein-Pringle White Garden, it was immediately apparent that something wonderful was happening. Colorful arrangements, bright ribbons and whimsical displays greeted

the attendees as they searched for another hors d'oeuvre to munch on or that just-perfect plant in the Botanical Quintessentials tent. The most awe-inspiring display was inside the dining tent. White columns reaching to the tent roof were covered in greenery and beautiful Chinese butterflies. The tablecloths had been chosen to complement the riot of color elsewhere and the tabletop arrangements, many of them several feet tall, were absolutely gorgeous. Some were simple glass containers of grapevines and gladioli or a display of elegant white candles in a candelabra. Others, topped by a garden hat, followed the theme of "A Parade of Hats." Most astounding were those that used small tree branches festooned with Spanish moss and, where possible, more butterflies. Even the tent poles were festive with multicolored arrangements. Peonies and roses, decorative donations from volunteers, and samples of the Arboretum bounty were used throughout. It was truly a grand and beautiful presentation.

Food Committee

New to the committee, **Phyllis Brookshire** spent many hours coordinating with Catering Works to put together just the right combination of delicious hor's d'oeuvres and a salmon entree that kept the crowd happy. And, let's not forget the beverages. The temperatures had soared (for May) and cool beverages hit the spot.

Development News

Hospitality Committee

Marge O’Keeffe and her fantastic, hard-working group from the Raleigh Garden Club worked with Phyllis in preparing the table settings, saving the committee a small fortune. Returning later in the day, dressed in finery, they assisted with various tasks around the garden. Their smiling faces greeted folks as they entered the Klein-Pringle White Garden and they assisted the staff with the Hat Shop. We couldn’t have done it without these ladies!

Invitations Committee

In an effort spearheaded by **Catherine Maxwell**, the invitations were designed by committee member **Patrice Cherry** and her colleagues. A dedicated group of volunteers “stuffed” them and they were on their way (Is it okay if I personally thank my mother, husband, and daughter?). Patrice did her usual outstanding job with the design and a message that invited us to “mingle with afternoon spirits among sunlight and herbs and dine amidst butterflies and friends.” Who could resist?

There’s no way to mention and thank everyone who participated in the Gala in the Garden. We certainly want to acknowledge the student volunteers from **Pi Alpha Xi** and the **NC State University Horticulture Club**. A special thanks goes to volunteer **Walt Thompson** and **Mitzi Hole**, JCRA Research Technician, who held down command central. Please take a moment to look over the list of committee members. Each and every one gave of their time and talents to make sure this was truly a memorable event!

It was a great party! Hope you were there. No? Mark your calendar for May 6, 2001. We’re doing it all over again!

Volunteer News

By Nancy Margaret Brodd
Volunteer Coordinator

Fran Johnson is Leaving

Fran Johnson is retiring as the JCRA Tour Guide Coordinator. I tried to tell her “no,” but as all you Tour Guides know, it is nearly impossible to tell our Fran “no.” That is what makes her such a great coordinator. During the four years in this volunteer position, Fran never had to cancel a Tour. She always found the volunteers needed due to her relentless telephoning of the wonderful group of Tour Guides.

Fran began helping the JCRA in 1996 as mailings and plant distributions volunteer. Soon afterward, **Shirley Jones** retired from the Tour Guide Coordinator position and **Vivian Finkelstein** quickly recruited Fran to take over. Fran was a unique coordinator because unlike her predecessors, she was not a tour guide. This fact certainly makes Fran that much more determined to find guides.

While Fran volunteered for the JCRA, she also found time to volunteer for Senior Games. In the past, Fran has volunteered for the Wake County Library and was the Public Relations Chairperson for the Wake County Extension Homemakers. I consider her a bit of a celebrity for having that position and for being among the first residents of Cameron Village in the late 1940's.

It will be strange not having Fran around, donning her fabulous turquoise, corralling all the Tour Guides over the telephone lines, but she promises to continue volunteering with us at mailings and various other tasks.

When I asked Fran why she was leaving this position she responded, “Well, I’m turning 80 in January and deserve a rest!” I doubt she will be resting much. She plans to continue with her genealogy research, reading, and of course, gardening. Also, she will be busy traveling to her friends in Arizona (her turquoise connection) and visiting with her children and grandchildren in D.C. and Florida.

If you have not seen the album Fran made for the volunteer office, [Visit to Selby Botanical Garden](#), please do!

Thank you, Fran, for everything! ❁

Special Thanks

Special thanks to recently retired Volunteer Curators, **Guy Meilleur** of the Blue Conifer Collection, **Ken Zearfoss** of the Southwest Garden, and **Natalie Sadler** of the Labyrinth Garden. Guy can still be seen around the JCRA giving tours and one may catch a rare glimpse of Ken as he drops in occasionally to help out. Natalie looks forward to seeing our new Education Center. I hope everyone saw her article in the Spring 2000 Newsletter, “Transitions in the Labyrinth Garden.” Thank you, Guy, Ken, and Natalie, for all the nurturing, time, and dedication each of you have given unselfishly to the JCRA. ❁

A New Place for Volunteers

I have been working with the Visitor Center Curator, **Kathleen Thompson** and **Sharon Mackey** to claim a board in the Visitor Center for the volunteers. Current volunteer opportunities will be listed with Volunteer Interest Forms

available. There will also be Volunteer Log Sheets located here.

This board will be outlined with pictures of our volunteers. Photographs of the latest volunteer events will be posted as well.

The idea is to unify our volunteers, by seeing who you all are from the photos and to let you all know our latest volunteer needs. This will also give our many guests the opportunity to see how important our volunteers are and to offer them a chance to become a part of our volunteer team. So next time you're at the JCRA be ready to smile for the camera and look for your picture on our new board!

New T-shirts

The new T-shirts are available at the Volunteer Office. The weathervane is the theme for this year. It was chosen for two reasons. First, it represents the JCRA soaring to new heights in the new century. Secondly, since the weathervane is visible from the Beltline, we are hoping it will act as a beacon to our visitors. They are the same bargain price of \$15 for the T-shirts and \$20 for the sweatshirts. Hurry, while supplies last! ❁

Volunteer Opportunities

The following are volunteer positions that need to be filled as soon as possible. New volunteers can find Volunteer Interest Forms in room 162, Kilgore Hall and at the Volunteer Office. If you are interested or have

any questions, please contact me at (919) 515-3132 or <nancy_margaret@ncsu.edu>.

Coordinator of Tour Guides – This position requires organizational and people skills. Contacts are made via e-mail and telephone with our Secretary, volunteer Tour Guides, Volunteer Office volunteers, and those requesting tours. It is somewhat seasonal with the busiest times being spring and fall. It affords flexibility and may be done at home at your convenience. No Tour Guide skills or horticulture knowledge necessary.

Engravers – These individuals need some computer skills and willingness to learn how to use the engraver machine. Initial training will be done with **Nancy Doubrava** and volunteers. After training, engraving can be done independently. This requires 1-3 hours a week.

FOA Lecture Assistant – Two volunteers are needed to help setup refreshments and sign in guests at our FOA Lectures. These are held on campus, at Kilgore Hall, once a month, on Thursday evenings. It would require about 2-3 hours. This is a great way to see the lectures and meet other JCRA members and volunteers!

Writers Wanted – Any volunteers who enjoy writing and would like to help with our Volunteer News section, please contact me ASAP! 

Welcome to the New Volunteers

“Moonlight” in the Gardens

Be sure to mark your calendar for November 3 & 4, 2000. The JC Raulston Arboretum will be open both evenings from 6:00 p.m. until 9:00 p.m. to showcase the gardens in a new “light.” We’ve arranged for **Mr. John Garner** of Southern Lights in Raleigh, a garden lighting expert, to exhibit his wares and allow us to enjoy a rare, after-dark visit to the Arboretum.

Visit the Arboretum’s Web site at <www.arb.ncsu.edu> or call us at (919) 515-3132 for ticket information.
